What if a presentation remote control was so intuitive and so advanced in its design and feature set, it added a little something to presentations? Such as, caché, style, even elegance. Introducing the RemotePoint Onyx. It's a presentation remote designed by design engineers, which is to say they've thought about everything — form and function, bells and whistles.

How it looks and feels in your palm is as important as how it functions under pressure. Because at the core of every great presentation is a confident presenter. With the added ease and technology of a revolutionary tool like the RemotePoint Onyx, captivating the room just got a whole lot easier.

Let's talk technology.

You do the talking, the Onyx does the rest. With functions like a digital clock, a brighter laser, a dockable USB receiver with Auto RF technology that locates available frequencies to avoid interference and more, you are free to breathe easy and work the room.

RemotePoint Onyx. Present with Confidence.
