Revolutionizing Multi-projector Staging with SOLID SHINE Laser

Flagship Picture Quality

Massive Brightness, Compact Body

Combining SOLID SHINE Laser with next-generation 3-Chip DLP™ processing technology, the PT-RZ21K Series develops 21,000 lumens* of brightness with truly spectacular color performance superior to other lamp-based products. Dual solid-state laser-light sources and dual heat-resistant phosphor wheels work with three DLP™ modules (R/G/B) for intense brightness, true color accuracy, and high contrast on large screens.

* Luminance is measured at center of screen in NORMAL Mode.

Dual-Drive Laser Design for Reliability in Dusty Environments

Dual-Laser Drive

Solid-state laser diodes are grouped into two discrete modules. A redundancy circuit minimizes brightness- and color-uniformity loss should a laser diode fail, making the PT-RZ21K Series ideal for mission-critical applications.

Sealed and Dustproof Optical Engine

Hermetically sealed laser modules, durable filtering, and refined air-intake maintain brightness and extend life in dusty location. Product testing against severe guidelines assures stable operation in environments containing 0.150 mg of dust per cubic meter*.

* Dustproof tests are conducted to confirm operational effectiveness under conditions with 0.15 mg/m³ of particulate matter (based on tests by the American Society of Heating, Refrigerating, and Air-Conditioning Engineers [ASHRAE], and the Japanese Building Maintenance Association). Measurements are made using acceleration tests.

Supreme Flexibility

Free 360-degree Orientation

SOLID SHINE Laser enables free 360-degree installation through any axis. Together with powered lens shift and wide range of optional lenses, the PT-RZ21K Series can project images from any orientation without picture distortion.

Vertical 360°

Quick Start and Quick Off

No warm-up or cool-down period is required when operating PT-RZ21K Series projectors. Images appear almost instantly, and the projector can be switched on and off whenever desired.

The World's First*¹ Filterless*² Large-Venue 3-Chip DLP™ Projector

The Panasonic PT-RZ21K Series is the world's first 3-Chip DLP™ laser projector*¹ to eliminate need for a consumable air filter, enabling maintenance-free operational life of 20,000 hours*³ for the whole projector. This is achieved with a hermetically sealed optical engine and heat-sink-based internal cooling system with a one-way airflow.

The projector can operate continuously for long periods in large-scale event environments without regular maintenance, saving operators considerable time and money. With no filter, light-source lifespan of 20,000 hours, and controlled, linear picture degradation, the PT-RZ21K Series leads the field for low TCO.

SEALING — Prevents air and dust intrusion — Optical engine's hermetic sealing improved by exclusive Panasonic technologies

COOLING — Heat Sink — Hermetically sealed optical engine maintains stable temperature by emitting internal heat via heat sink
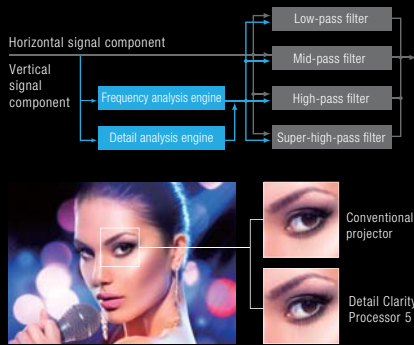

FILTERLESS*² — FILTER — 20,000-hour maintenance-free*³ for low-TCO operation

Built-in Geometric Adjustment

Geo Adjustment adapts images for projection onto specially shaped screens with fine-tuning via remote control.

90 % Brightness Uniformity

SOLID SHINE Laser delivers superior brightness uniformity thanks to accurate white balance control. Brightness uniformity is greater than 90 % when measured at screen corners, edges, and center.

Guaranteed Laser Safety

SOLID SHINE Laser technology is as safe for eyesight as any lamp-based projector. A diffusing lens reduces the concentration of beam energy, so accidental direct exposure will not result in damage to eyesight.

Multi-screen Support System

This system optimizes multiple screens with edge blending, color matching, and digital image enlargement functions.

• **Edge Blending**: Edges of adjacent screens can be blended and their luminance controlled.

• **Color Matching**: Corrects color reproduction variations of each projector via PC control software.

• **Digital Image Enlarging**: Digital zoom up to 10x (H/V)*3, and up to 100 units (10 x 10) can be edge-blended to create large multi-screen images.

Multi-unit Brightness and Color Control

Sensors detect color and brightness apparent on screen. Projectors automatically calibrate for a uniform multi-screen image, adding a layer of convenience and cost saving both in short-term and long-term events.

Active 3D Projection Capability

This projector series is compatible with active 3D projection technology. It supports an external transmitter and active-shutter glasses, or an active filter and passive glasses[2] for viewing 3D images.

Geometry Manager Pro Software and Upgrade Kits

Geometry Manager Pro software expands onboard functionality and simplifies multi-screen setup. The free software enables multi-screen color-matching, edge-blending, and more via networked PC. Two optional plug-in kits are available: ET-UK20, which adds screen uniformity correction and creative masking functions, and ET-CUK10, which activates Auto Screen Adjustment for simultaneous and automatic setup of multiple projectors. The latter performs multi-screen and curved-screen calibration in three steps using a camera[3] and networked PC, simplifying adjustment, edge blending, color matching, stacking, brightness, and black level setup.

Compatible with Panasonic PT-DZ21K/DZ21K2 Series 3-Chip DLP™ Projectors

The PT-RZ21K Series joins the Panasonic 3-Chip DLP™ projector family in sharing a range of mutually compatible optional accessories including frames and ultra-short-throw and zoom lenses. This reduces upgrade or replacement costs for events and staging companies with large inventories.

Supports Art-Net DMX, Crestron Connected™, and PJLink™

Art-Net DMX protocol for lighting management enables connection with lighting consoles for added functionality and control options. Crestron Connected™ and PJLink™ (Class 2) streamline integration into existing AV infrastructure.

*1 Combination of primary/secondary input terminals is fixed. Switching to secondary input (or primary input) occurs automatically when the input signal for primary input (or secondary input) is disrupted. The Backup Input Setting is enabled only when the input signal to primary and secondary terminals is the same. *2 Please contact your sales representative for further information. *3 Supported cameras: Nikon D5200/D5300/D5500.

Additional Features

DICOM Simulation Mode

This imaging mode is similar to the DICOM Part 14 medical imaging standard. It lends a film-like resolution to X-ray images, making the projector suitable for medical presentations and training.

Note: This product is not a medical instrument. Do not use for actual medical diagnosis.

Waveform Monitor Function

If source device output levels fluctuate, the original black and white levels of the image cannot be reproduced correctly. The projector can display these waveforms on screen, where they can be adjusted automatically or manually.

Power Management Reduces Downtime

Auto power management compensates for voltage fluctuations. Image display is maintained at a reduced brightness even if voltage drops below specified requirements, rather than shutting the projector off.

Supports BT.2020 Emulation and HDR

PT-RZ21K Series has emulation for BT.2020, a 4K color-space standard. It reproduces a wider color gamut than conventional standards. Additionally, they support HDR (High Dynamic Range). Image reproduction is stunning, from deepest black to sparkling bright highlights.
