1. Overview

- These specifications define projector control commands for PLC-WTC500L.
- The projector control commands are used to control a projector through RS-232C from a computer.

2. Serial Interface Specification

2.1. Transfer Specification

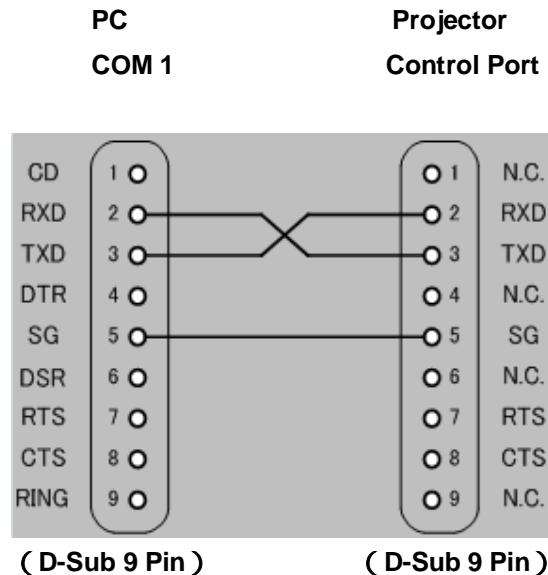

Item	Specification
Synchronous system	Asynchronous
Transmission Speed	9600 / 19200
Data Length	8 bits
Parity	None
Stop Bit	1
Flow Control	None

Transmission speed: initial setting value is 19200.

Transmission speed can be changed in service mode.

2.2. Connection

Dedicated serial cable must be used for the connection between computer and projector.

3. Notes for Communication

- The projector command is defined as one command per line that starts with "C" and ends with carriage return (0x0D).
- When carriage return (0x0D) is received, decoding starts.
- There are two types of commands; Functional Execution Commands which function in a way comparable to remote and console keys and Status Read Commands which get basic statuses of projector.

Example of Functional Execution Command: "C05" [CR]

Example of Status Read Command: "CR0" [CR]

- In the cases below, it clears information of receive buffer.
 - 1) When LF (0x0A) and EOF (0x1A) are received
 - 2) When it takes more than a second to receive one command (until the projector receives carriage return since it has received the first data)
- or the pipelining of Functional Execution Command, allow the following interval time after receiving return value.
 - 1) Commands "VOLUME +/-", "ZOOM UP/DOWN", "FOCUS UP/DOWN" and "LENS-SHIFT UP/DOWN/RIGHT" --> 100ms
 - 2) Other commands --> 500ms
- For the pipelining of Status Read Command, allow more than 500 ms of interval time after reception of return value.
- Do not send any subsequent command before reception of return value; however this is not the case when no response is returned after more than 5 seconds.
- It takes about 7 seconds for internal initialization after plugging in AC power. During this time, it cannot process commands. Do not issue any command.
- During 7 seconds after powering on in Standby mode, when the command for internal initialization or lamp lighting is received, ACK value is returned but the function is not executed. However, for Status Read Command, the function is executed in 500 ms after receiving ACK value for POWER ON command.
- During countdown and cooling operations:

During countdown operation after execution of power-on, as well as during cooling operation after execution of power-off, ACK value is returned but the function is not executed when command is received.
- On switching INPUT:

During 5 seconds after switching action has started in response to reception of INPUT switching command, ACK value is returned but the function is not executed when command is received. However, for Status Read Command, the function is executed in 500 ms after receiving ACK value for INPUT switching command.
- The number of characters indicating successful reception of command varies according to the command. Please see [7. Status Read Command].
- Characters used for commands must be Capital (A - Z).

6. Functional Execution Command

6.1 Format

- PC issues a command in the following format:
"C" **Command** [CR]
Command: two characters (See Functional Execution Command Table)
- Projector decodes the received data and returns the result when getting ready to receive the next command.
[ACK] [CR] : (0x06, 0x0D) When received Functional Execution Commands.
- When received data cannot be decoded, "?" [CR] is returned.

6.2 When the command pipelining is needed

In the case of the function requiring command pipelining, such as "Volume +/-" and "Zoom +/-", operation should follow the same way as in remote control:

- 1) Sending-side system issues commands every 100 ms after receiving the return value.
- 2) When receiving an applicable command, the function is executed for 120 ms from the moment.
- 3) When receiving the same command in sequence within 120 ms, the function is executed for another 120 ms from the moment of the second command reception.
- 4) When any other command is not received after 120 ms, the execution of pipelining is stopped.
- 5) When Projector receives another command within 120 ms, the execution of pipelining is stopped.

6.3 Transfer Example

Change Projector mode to Video with Basic Command.

Command: one character (See Status Read Command Table)
- When projector receives an appropriate command, it returns the required data in string.

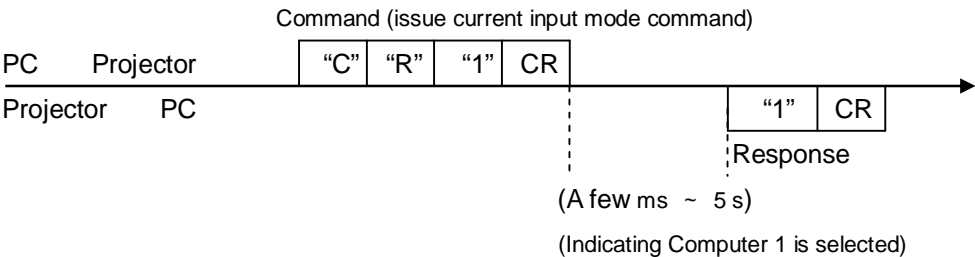

Required Data

[CR]

Required Data: string (See Status Read Command Table)
- When the received data cannot be decoded, the projector returns “?” [CR] is returned.

7.2
 Transfer Example

Getting Input mode information of projector by basic commands.

7.3
 Operation Requirements

When Standby mode of Setting menu is set to Eco and Projector status is Standby mode, Functional execution commands become invalid

7.4
 Status Read Command

Command	“CR0” [CR]	
Detail	Get the projector's operating status	
Response	Acceptable	“%1” [CR]
	%1	“00” = Power ON “80” = Standby “40” = Countdown in process “20” = Cooling Down in process “10” = Power Failure “28” = Cooling Down in process due to Abnormal Temperature “88” = Standby after Cooling Down due to Abnormal Temperature “24” = Power-Save Cooling Down in process “04” = Power Save “21” = Cooling Down in process after OFF due to Lamp Failure “81” = Standby after Cooling Down due to Lamp Failure “2C” = Cooling Down in process after Power Off due to Shutter management “8C” = Standby after Cooling Down due to Shutter management
	Unacceptable	“?” [CR]

【Details for Response】

- **“00” [CR]**

Status: Power ON

Normal image is on-screen.

- **“80” [CR]**

Status: Standby

When the status is Standby, Status Read Commands are always accepted, but any Functional Execution Commands are not accepted except for POWER ON command.

- **“40” [CR]**

Status: Countdown in process

When “Display” in Setting Menu is set to ON, Countdown operation is started by execution of POWER ON; while “Display” in Setting Menu is set to OFF, the status moves directly to Power ON without Countdown operation.

- **“20” [CR]**

Status: Cooling Down in process

When the status is Power ON, and then POWER OFF Command (“C01” [CR]) is executed, it moves to Cooling Down status.

When lamp turns off and about 90 seconds of fan spinning finishes, the above status automatically moves to Standby (The fan spinning time depends on models.)

This function is intended to cool down lamps and other optical parts, and is quite important for projector’s reliability. During this time, any Functional Execution Command is invalid.

- **“10” [CR]**

Status: Power Failure

When the power supply voltage inside the projector reaches abnormal status, the projector is automatically turned off.

The projector returns “10” [CR], which indicates it enters Power OFF status due to Power Failure. In this case Fan also stops unlike Cooling Down status.

Abnormal power supply voltage includes;

- Filter abnormal status / • Shutter abnormal status

- **“28” [CR]**

Status: Cooling Down in process due to Abnormal Temperature

When the inside temperature rises abnormally high, it automatically starts Cooling Down operation. The projector returns “28” [CR].

Even if the temperature goes down during this process, the given Cooling Down process is conducted.

- **“88” [CR]**

Status: Standby after Cooling Down due to Abnormal Temperature

When the status becomes Standby after the temperature goes down by Cooling Down operation invoked due to Abnormal Temperature, the projector returns “88” [CR]. This indicates Abnormal Temperature caused turning to Standby status.

This status continues until the next operation is started; when Power On is executed, the projector clears the information of Abnormal Temperature and normal operation starts.

- **“24” [CR]**

Status: Power-Save Cooling Down in process

This indicates Power Management in the Setting menu is enabled and Power-Save Cooling Down operation is in process.

During this time, any Functional Execution Command is invalid.

In this Power-Save Cooling Down function, the status moves to Power Save after the given Cooling down operation.

- **“04” [CR]**

Status: Power Save

This indicates it moves to Power-Save status by Power Management function as set in the Setting menu.

- **“21” [CR]**

Status: Cooling Down in process after OFF due to Lamp Failure

When the projector is turned off due to lamp failure, it automatically starts Cooling Down operation. The projector returns “21” [CR]. “21” [CR] has been kept during Cooling Down operation.

- **“81” [CR]**

Status: Standby after Cooling Down due to Lamp Failure

The projector has recovered from Lamp Failure status. When the projector enters Standby status after Cooling Down operation invoked due to lamp failure, it returns “81”. This indicates the status turns to Standby due to lamp failure. This status continues until the next operation is started; when Power On is executed, the projector clears the information of Lamp Failure and normal operation starts.

- **“2C” [CR]**

Status: Cooling Down in process due to Shutter management function

This indicates it has moved to Cooling down status according to the setting of Shutter Management function in setting menu. During this time, Functional Execution Commands are not accepted.

- **“8C” [CR]**

Status: Standby after Cooling Down due to Shutter management function.

This value is returned when Cooling Down operation due to Shutter management has been completed and the status has been moved to Standby. The status is kept until the next operation starts. When projector is turned on again, it cancels the last status and starts normal operation.

7.5 Input Mode Read Command

Command	"CR1" [CR]	
Detail	Get currently selected Input No.	
Response	Acceptable	"%1" [CR]
	%1	"1" = Input 1 is selected. "2" = Input 2 is selected. "3" = Input 3 is selected. "4" = Input 4 is selected.(only for Networking-capable models)
	Unacceptable	"?" [CR]

7.6 Lamp Time Read Command

Command	"CR3" [CR]	
Detail	Get total lamp running hours.	
Response	Acceptable	"%1_%2" [CR]
	%1	Each lamp data follows in sequence with one space between each of them. %1 = lamp No.1 %2 = lamp No.2 ex; "00410_00410" [CR] ----> Lamp No.1 = 410 Hours Lamp No.2 = 410 Hours Note; -each data shall be 5 digits.
	Unacceptable	"?" [CR]

	%1 %2 %3	%1 = Temp. of sensor 1 %2 = Temp. of sensor 2 %3 = Temp. of sensor 3 Temperature data basic format is "_00.0". ("_" indicates a space) When the temperature goes under 0, it starts with "-" instead of a space like "-05.5" [CR]. When no temperature data returns due to hardware problems, it starts with "E" like"E00.0" [CR]. With several built-in temperature sensors, the projector returns the values in succession. "_31.5 _35.2_ 33.4 " [CR] The first sensor's data is followed by one space and afterwards the second sensor's data.
