## Introduction

ClickShare is Barco's wireless presentation, collaboration solution that makes sharing content seamless, easy and stress-free: any meeting participant can share content with only the click of a button. The universal USB-powered ClickShare Button and multi-platform ClickShare App avoid the unsightly mess of cables often seen in meeting rooms. Next to this, sharing with ClickShare does not alter your screen size or aspect ratio, so what you see on your laptop screen is replicated exactly on the big meeting room screen. ClickShare transforms your meeting into a complete collaborative experience with only a single click.

This guide helps you to optimally deploy ClickShare units in the current set-up of (remote) collaboration meeting rooms. It gives an overview of the different specific integration settings and some examples on how to perform the set-up and installation of ClickShare units.

## Integration with Video Conferencing and Unified Communication solutions

The ClickShare Base Unit has been designed to work both in stand-alone mode and in an integrated environment. Many of the existing Video Conferencing and Unified Communication solutions have a HDMI input, either natively or via USB adapter, which allows the presenter to share content within the context of a remote meeting. The **HDMI output of the ClickShare Base Unit can be connected to this input to allow wireless collaboration to take place within the meeting room and beyond the meeting room. Both systems can be configured to deliver the best user experience** for both in-room presentation and remote content sharing.

ClickShare adds value for both end-users and IT managers:

- End-users have **one easy-to-use content sharing experience** across common meeting rooms equipped with ClickShare, and remote collaboration rooms. No additional content sharing applications to install and learn; installing specific apps to share their content is not needed. The same way of working and the same user experience applies to all rooms.
- ClickShare allows **both employees and guests to share from their laptop in a secure way** with the Button, the ClickShare Apps, and different BYOD protocols such as Airplay, Google Cast and Miracast (depending on model).
- The **end-user doesn't have to "mess" with cables** whenever he wants to perform screen sharing with higher performance. Finding the right adapters to HDMI, dealing with resolution changes, etc. are no longer an issue. When an end-user wants to temporarily disable his screen sharing, there is no need to unplug the HDMI cable and re-plug it whenever ready, actions that typically take quite some time to sync again. The user can just click the button to share whenever he is ready, or to stop sharing.
- IT managers can deploy our content sharing solution in a **fully secure** way. ClickShare offers 3 levels of security to fit any enterprise environment, and by adding ClickShare to a remote collaboration solution, the same security applies. There is no hassle to make other applications work across different secure, BYOD, guest and other corporate networks.

Besides other specifics, some of the Video Conferencing and Unified Communication solutions allow the meeting participants to select whether the input is presented or not. In many cases this can be controlled using the meeting room control panel, or alternatively, the VC device can be configured to share whenever a signal is detected on the HDMI input.

To provide an optimal Video Conferencing experience and allow participants to see each other's video camera stream maximized when no content is being shared, ClickShare can be set to **automatically power-down the HDMI output when no content is being shared**. This way, the Video Conferencing or Unified Communication solution will remove the input from the screen as no signal is being detected.

To configure this option, simply follow the next steps:

- Connect to the Base Unit, via Wi-Fi or an Ethernet connection, browse to the ClickShare Configuration web interface and log in (Figure 1)
- On the left, click on the Personalization entry, next click on Wallpaper to review the settings of the wallpaper.
- On the Wallpaper page, verify that "show the wallpaper when no one is sharing their screen" is disabled (Figure 2)
- Press 'Save changes' to activate this configuration setting.
- From now on, the ClickShare Base Unit will go to standby when no content is being shared on the screen, which will be interpreted by the VC system as if there was no device connected to the HDMI input.

**Note:** at some instances, you will want to see the wallpaper, e.g. in order to identify which ClickShare Wi-Fi network to connect to with a ClickShare app from a mobile device. This can be done by pushing the button on the front side of ClickShare: the wallpaper will be shown for some time and then disappear again.

## Integration with Teams Rooms

Teams room systems allow you to tap into the Teams experience for your meeting to facilitate the **automatic presentation** of content on the screen a feature called *Auto Screen Sharing* is available. This feature will present the content within the Teams meeting whenever a signal is detected on the HDMI input. In the description below, we will be using the Logitech Tap as example device, but any Microsoft Teams Room System will behave in the same way.

### Enable Auto Screen Sharing on the room system

To enable the *Auto Screen Sharing* feature, please follow these steps:

- On the Logitech Tap, tap the three dots (more) on the home screen (Figure 3)
- In the pop-up menu tap on the *Settings* entry, the Settings screen will present you with the set-up configuration of your device. On the left you will see different set-up pages including *User Account*, *Features*, *Meetings*, and *Windows Settings*.
- Tap on *Meetings* to review the current set-up of the device.
- On the *Meetings* page, verify that the **Auto Screen Sharing** feature is turned **on**
- Tap on Save and Exit to complete the process.

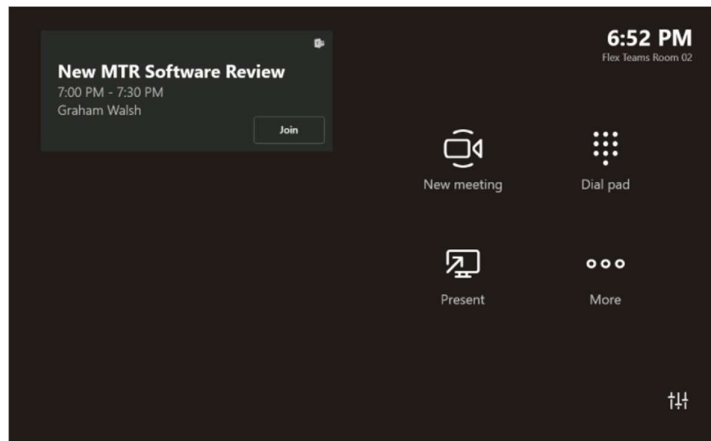

Figure 3: The Logitech Tap home screen, notice the three dots in the middle right

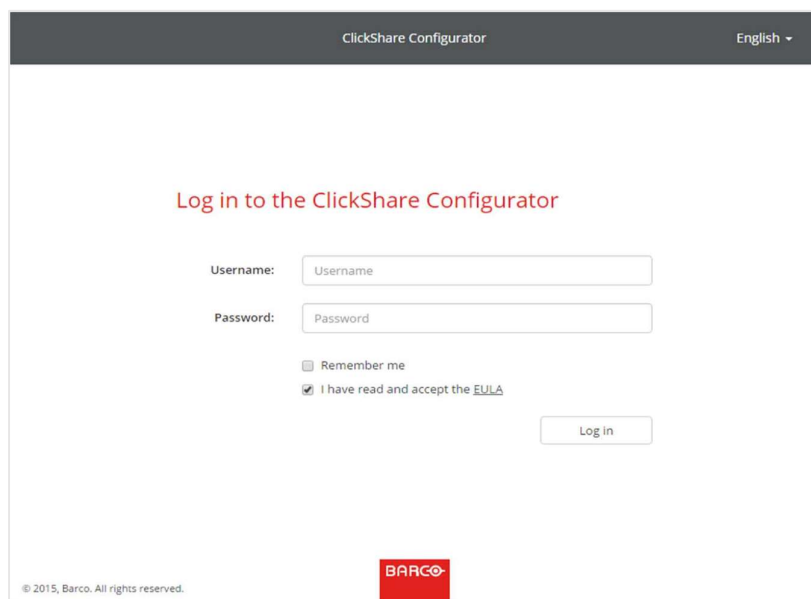

### Enable Auto Standby when no content is shared on the ClickShare

With the Auto Screen Sharing feature enabled the Logitech Tap will now present the content within Team meeting whenever the ClickShare Base Unit is powered on, independent whether any content is being shared with the ClickShare Button (or ClickShare App). As such, when no content is shared, this will result in the ClickShare wallpaper being shared within your current Teams session and a minimized video camera stream being present at the bottom of the screen.

In order not to share the wallpaper in the call when no content is shared, follow these steps:

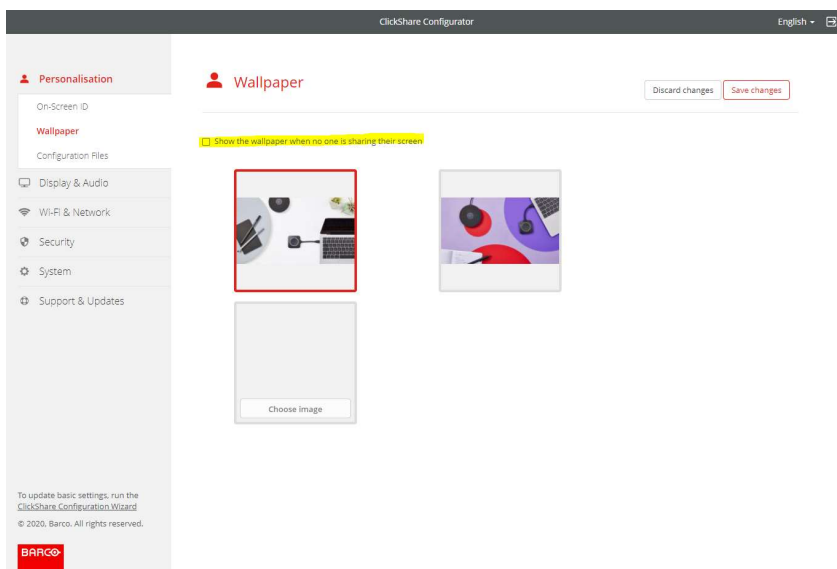

- Connect to the Base Unit, via Wi-Fi or an Ethernet connection, browse to the CS Configurator web interface and log in (Figure 4)
  - On the left, click on the Personalization entry, then click on Wallpaper to review the settings of the wallpaper.
  - On the Wallpaper page, verify that "show the wallpaper when no one is sharing their screen" is **disabled** (Figure 5)
  - On the CX-50 and CSE-200+, select eco-mode under System - Energy Savers for a better user experience
- The ClickShare Base Unit will now go to standby when no content is being shared on the screen.

The Logitech Tap will show “Please plug the HDMI cable into your device” when the ClickShare is in standby. A simple press on the Button is enough to present content on the screen.

The screenshot shows the 'ClickShare Configurator' login interface. At the top, there's a dark header with 'ClickShare Configurator' on the left and 'English' with a dropdown arrow on the right. The main content area has a red heading 'Log in to the ClickShare Configurator'. Below this are two input fields: 'Username:' and 'Password:'. Under the password field, there are two checkboxes: 'Remember me' (unchecked) and 'I have read and accept the [EULA](#)' (checked). A 'Log in' button is positioned to the right of these checkboxes. At the bottom left, it says '© 2015, Barco. All rights reserved.' and at the bottom center is the 'BARCO' logo.

Figure 4: The Configurator log-in page

The screenshot shows the 'ClickShare Configurator' wallpaper edit screen. The top header is the same as in Figure 4. On the left is a sidebar with a 'Personalisation' section containing 'On-Screen ID', 'Wallpaper' (highlighted in red), and 'Configuration Files'. Below this are other settings categories: 'Display & Audio', 'Wi-Fi & Network', 'Security', 'System', and 'Support & Updates'. The main area is titled 'Wallpaper' and has 'Discard changes' and 'Save changes' buttons. A yellow tooltip says 'Show the wallpaper when no one is sharing their screen'. There are two preview images of a desktop with a red circle highlighting a specific area. Below the previews is a 'Choose image' button. At the bottom left, it says 'To update basic settings, run the ClickShare Configuration Wizard' and '© 2020, Barco. All rights reserved.' with the 'BARCO' logo.

Figure 5: The wallpaper edit screen

## Example of wiring schedule

In this situation we use Logitech Tap as a Teams room system, with the added benefits of using ClickShare for all you wireless presentation needs.

## Integration with Zoom Rooms

Zoom Room allows you to tap into the Zoom remote collaboration experience for your meeting room. Zoom offers its own cloud service and allows you to connect with H.323/SIP and Teams systems. For an even better experience we advise to combine the Zoom Room with the wireless collaboration capabilities of ClickShare. This allows you to tap into your business unified communications strategy and share with a click of the ClickShare Button or the ClickShare Apps.

The ClickShare Base Unit can be connected to the Zoom Room using a standard HDMI cable. Connect the ClickShare Base Unit HDMI output with the Zoom Room HDMI input. Since Zoom Room is built on top of standard PC or Mac, a HDMI-to-USB to converter is required<sup>1</sup>. Once the set-up is done, Zoom will always show content when HDMI is enabled, and transmits this to the remote side. No other configuration is needed.

### Enable Auto Standby when no content is shared on the ClickShare

The Zoom Room always presents the content within the Zoom meeting whenever the ClickShare Base Unit is powered on, independent of whether content is being shared with the ClickShare Button (or ClickShare App) or not. As such, when no content is shared, this will result in the ClickShare wallpaper being shared within your current Zoom session and a minimized video camera stream being present at the bottom of the screen. To maximize the video camera stream when no content is shared, follow these steps:

- Connect to the Base Unit, via Wi-Fi or an Ethernet connection, browse to the CS Configurator web interface and log in (Figure 6)
- On the left, click on the Personalization entry, then click on Wallpaper to review the settings of the wallpaper.
- On the Wallpaper page, verify that "show the wallpaper when no one is sharing their screen" is disabled (Figure 7)
- The ClickShare Base Unit will now go to standby when no content is being shared on the screen.

---

<sup>1</sup> More information on the required HDMI-to-USB converter to facilitate capturing on a Zoom Room device can be found on <https://support.zoom.us/hc/en-us/articles/201504265-Wired-HDMI-Screen-Share-via-Capture-Device>

Figure 6: The Configurator log-in page

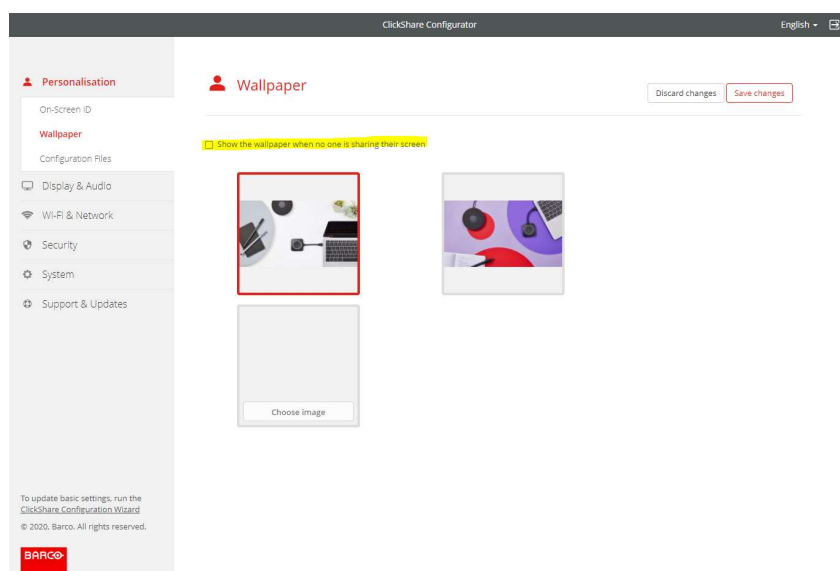

Figure 7: The wallpaper edit screen

**Additional recommendation**

Sometimes you will want to see the wallpaper, e.g. in order to identify which ClickShare Wi-Fi network to connect to with a ClickShare app from a mobile device. This can be done by pushing the power button on the front side of ClickShare Base Unit. The wallpaper will be shown for some time and then disappear again.

Since the ClickShare CS-100 and CSE-200 Base Units support both 1920x1200 and 1920x1080 resolution, when using a HDMI-to-USB converter, the ClickShare Base Unit will output a 1920x1200 resolution when in automatic resolution discovery. Since most displays have a resolution of 1920x1080, it is best to fix the ClickShare Base Unit output resolution to 1920x1080.

## Integration with Cisco Systems

Cisco video conferencing endpoints allow you to tap into the Cisco experience for your meeting room. For a better experience inside your Cisco video conferencing rooms, we advise to combine the Cisco equipment with the wireless collaboration capabilities of ClickShare. This allows you to leverage your preferred business video conferencing installation and share with a click on the Button. Following description was put in place in combination with a Cisco TelePresence SX10.

The ClickShare Base Unit can be connected to the Cisco equipment using a standard HDMI cable. Connect the ClickShare Base Unit HDMI output with the Cisco HDMI input. No other cables or connections are required. Without configuration, a manual action will still be required to show the content from the ClickShare Base Unit within the Cisco session.

This can be achieved by tapping "share" on the Cisco screen or through the remote and by selecting the ClickShare input source. Two simple steps will allow you to overcome the need for user interaction on the Cisco equipment when sharing content.

### Enable Auto Screen Sharing on Cisco equipment

To facilitate the automatic presentation of content on the screen a setting called "PresentationSelection" is available in the settings panel. This feature will present the content within the Cisco conference whenever a signal is detected on the HDMI input. To configure your Cisco equipment to share content automatically when someone inserts the Button, follow these steps:

- Go to the Cisco equipment and login with the admin account.
- In the Set-up tab, select Configuration.
- In the menu on the left, go to Video.
  - There, usually Connector will be used for the camera and Connector 2 for the HDMI input.
- For the connector on which you connected the ClickShare Base Unit, enter following settings:
  - InputSourceType: "PC"
  - Name: the meeting room name
  - OptimalDefinition Profile: High
  - PresentationSelection: "AutoShare"
  - Quality: "Sharpness" (select motion if you plan on sharing video most of the time)
  - RGBQuantizationRange: "Auto"
  - Visibility: "IfSignal"
- Click on "Save"

**Connector 2**

InputSourceType	PC	
Name	ClickShare MR Iceland	(0 to 50 characters)
OptimalDefinition Profile	High	
PresentationSelection	AutoShare	
Quality	Sharpness	
RGBQuantizationRange	Auto	
Visibility	IfSignal	

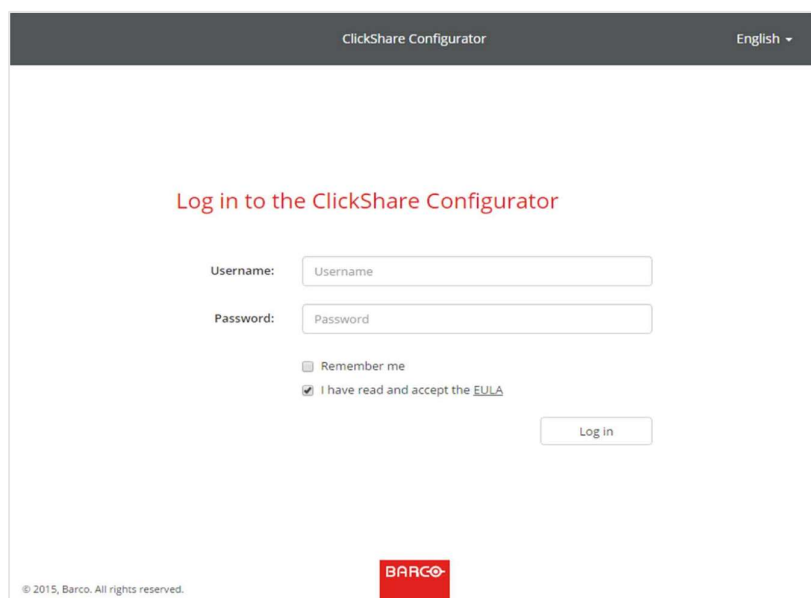

Figure 8: The Configuration screen

### Enable Auto Standby when no content is shared on the ClickShare

When configured as above, the Cisco equipment will always present the content within the Cisco session whenever the ClickShare Base Unit is powered on, independent whether any content is being shared with the ClickShare Button (or ClickShare App).

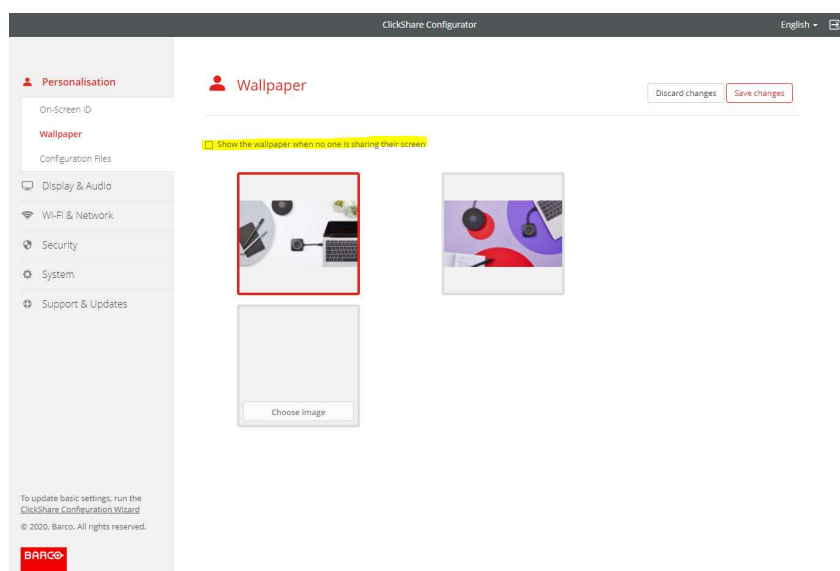

As such, when no content is shared, this will result in the ClickShare wallpaper being shared within your current video conferencing session and a minimized video camera stream being present at the bottom of the screen. To maximize the video camera stream when no content is shared, follow these steps:

- Connect to the Base Unit, via Wi-Fi or an Ethernet connection, browse to the CS Configurator Web interface and log in (Figure 9)
- On the left, click on the Personalization entry, then click on Wallpaper to review the settings of the wallpaper.
- On the Wallpaper page, verify that “show the wallpaper when no one is sharing their screen” is disabled (Figure 10)
- The ClickShare Base Unit will now go to standby when no content is being shared on the screen.

The image shows the login page of the ClickShare Configurator. At the top, there is a dark header bar with the text "ClickShare Configurator" on the left and "English" with a dropdown arrow on the right. The main content area has a white background. In the center, the text "Log in to the ClickShare Configurator" is displayed in red. Below this, there are two input fields: "Username:" and "Password:". Under the password field, there is a checkbox labeled "Remember me" and a checked checkbox labeled "I have read and accept the [EULA](#)". A "Log in" button is positioned to the right of these checkboxes. At the bottom left, there is a small copyright notice: "© 2015, Barco. All rights reserved." At the bottom center, there is a red Barco logo.

Figure 9: The Configurator log-in page

The image shows the wallpaper edit screen in the ClickShare Configurator. The top header bar is dark with "ClickShare Configurator" on the left and "English" with a dropdown arrow on the right. On the left side, there is a sidebar menu with a "Personalisation" section. Under "Personalisation", there are options for "On-Screen ID", "Wallpaper" (which is selected), and "Configuration Files". Below these are other system settings like "Display & Audio", "Wi-Fi & Network", "Security", "System", and "Support & Updates". The main content area is titled "Wallpaper" and has "Discard changes" and "Save changes" buttons at the top right. A yellow tooltip message says "Show the wallpaper when no one is sharing their screen". There are two preview images of desktop wallpapers. Below the previews is a "Choose image" button. At the bottom left of the sidebar, there is a small text block: "To update basic settings, run the ClickShare Configuration Wizard" and "© 2020, Barco. All rights reserved." A red Barco logo is at the bottom left of the sidebar.
