F-series family: different color wheels for your needs

Our 1-DLP laser platform for freedom (24/7, lens shift, wide color gamut), flexibility (360° setup) and 4K image quality

F90-4K13 /W13	F70-4K8/W8	F70-4K6/W6	F80 Q7/4K7/Q9/4K9 *(coming soon)*
Designed for mainstream ProAV applications	*Designed for demanding ProAV applications (e.g. motion platforms)*	*Designed for simulation and high-contrast applications:* smear reduction, dimming capabilities, etc.	*Designed for mainstream ProAV applications*
Color wheel approach:	**Color wheel approach:**	**Color wheel approach:**	**Color wheel approach:**
Two color wheels (CW) Ships w/ high-brightness CW High-color CW in the box (9,100 lms)	Two color wheels (CW) Ships w/ high-brightness CW High-color CW in the box (6,000 lumens) **Note:** inserting high-color CW will not equal F70-4K6 (e.g., no smear reduction & other features)	Only 1 CW: high-color	Only 1 CW optimizing for both colors and brightness No possibilities to change color wheel in projector **Note(!):** different brightness levels do not relate to CW, but to the light source
